Commissioner for Environment, Oceans and Fisheries

Janusz Wojciechowski,
Commissioner for Agriculture

18 March 2022

Dear President von der Leyen,

We are extremely alarmed by the European Commission's intention to once again postpone its proposal for legally binding nature restoration targets, which was foreseen for 23 March.

We understand the extremely difficult context in which this proposal is being finalised. With the devastating humanitarian crisis caused by the war in Ukraine ongoing, the priority right now is to end the conflict and ensure the safety and wellbeing of all those affected. But unfortunately, the biodiversity and climate crises won't stop for anyone.

Delaying the restoration law by months would jeopardise the EU's response to the climate and biodiversity crises and will put the European Green Deal agenda into further question.

Nature restoration is crucial to increase our resilience against the impacts of the climate crisis and to protect us from devastating events like floods, forest fires or droughts, all of which are increasing in frequency across our continent and our planet. Enshrining nature restoration principles and targets in law is the best pathway towards a resilient and sustainable Union, capable of withstanding external shocks - including to its food systems. By acting responsibly now, we will ensure that Europe is well-placed to face potential future crises.

We strongly reject the misleading use of "food security" arguments by those opposed to addressing the biodiversity and climate crisis. Millions are at risk of malnutrition in the coming months, especially in North Africa and the Middle East. To address this, we need to find solutions in partnership with those countries impacted and stop utilising food crops for producing energy, cut waste, reduce livestock numbers and reduce dependence on (gas-based) nitrogen

fertilizer. **Putting the restoration law on ice would do absolutely nothing to alleviate this crisis – on the contrary, it will make a future food crisis more likely.**

We therefore urge you not to delay the publication of an ambitious and enforceable nature restoration law, nor other important initiatives like the EU legislation on pesticides or the planned legislative framework for sustainable food systems, and to uphold the commitment expressed in the Biodiversity Strategy to show leadership in efforts to agree on a Global Biodiversity Framework.

Last year, over 104,000 EU citizens asked to adopt the restoration law without delay as part of the European Commission's own public consultation process. The nature and climate commitments of the Green Deal are central to making our society more resilient and sustainable and are now more necessary than ever.

Yours sincerely,

Ester Asin
