

To: Ursula von der Leyen, President of the European Commission

Brussels, 29 January 2026

Re: PFAS pollution: Affected Communities' response to our outstanding request for action and dialogue

Dear President von der Leyen,

One year ago, we wrote to you following [investigative reports](#) exposing how the PFAS industry has lobbied for decades to delay and weaken protections for European citizens. We also shared how PFAS pollution has profoundly affected our lives.

Despite the importance of the concerns and requests outlined, and notwithstanding the time elapsed, we regret to have received a negative response to our request to meet with you in person. Nevertheless, we inform you that we will be present at the European Commission's main entrance to convey first-hand testimonies from around 15 citizens affected by chemical pollution across several European countries. This initiative will take place in the presence of selected journalists.

We will remind you that, since our letter last year, the PFAS crisis has deepened. In France, over 60,000 people can [no longer drink](#) tap water. In Belgium, residents of Ronse – just 54 km from Brussels – have discovered severe contamination of their environment and bodies. In Germany, a recent [study](#) uncovered that 69% of fish are polluted with PFAS. At the same time, public mobilisation has grown. In 2025, landmark victories were achieved: in Italy, eleven former executives were sentenced to a total of 141 years in prison for PFAS pollution around the Miteni plant; in France, a ban on PFAS in cosmetics, textiles, shoes, waterproofing agents and ski wax, has entered into force.

Yet pollution continues. Each day of inaction increases the toxic burden in our water, land and bodies.

We are therefore deeply concerned by recent statements from Vice-President Séjourné and Commissioner Roswall suggesting restrictions limited to only consumer uses of PFAS. This approach would be ineffective and waste public resources. Scientific evidence shows that the main routes of exposure are drinking water and food, largely driven by emissions from industrial production, use and waste sites. Focusing only on

consumer uses ignores the largest sources of contamination and fails to tackle effectively the PFAS pollution crisis.

Our demands remain clear. We urge you to champion bold initiatives to protect European citizens and the environment. This includes:

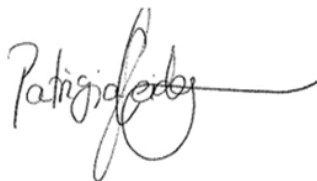

- **Banning PFAS chemicals** to stop further harmful pollution at source – the proposed universal PFAS restriction is the most effective way to do this. The EU must also strengthen pesticides and biocides regulations to prohibit the use of PFAS since these are not covered by the proposed universal PFAS restriction.
- **Comprehensive monitoring and remediation** of contaminated irrigation and drinking water and soil from all European PFAS pollution hotspots.
- **Health, psychological, legal and financial redress** to those harmed by decades of negligence, ensuring justice and relief for victims.
- **Ensuring the polluters pay** monitoring, remediation and compensation costs.
- **Accelerating the development and adoption of safe alternatives** to PFAS.

We respectfully call on you to demonstrate leadership by prioritising public health and the environment over short-term private interests. Meeting with us would have sent a strong signal of your commitment to protecting all Europeans. It is deeply concerning to observe that time has been made available for engagement with representatives of the chemicals industry, whose activities have had serious and lasting impacts on our lives, while our repeated requests for dialogue have gone unanswered. You still have the opportunity to reconsider this course and to engage directly with those affected. We trust that you will give this matter the attention it deserves.

We look forward to your response and to working together for a toxic-free Europe in these globally challenging times where EU leadership and commitment to the protection of human health and the environment is particularly needed.

Sincerely,

Patrizia Heidegger, Deputy Secretary, EEB
