

Open letter to  
the European Commission,  
the Heads of Government of EU Member States,  
the Members of the European Parliament,  
the European Committee of the Regions,  
and the European Economic and Social Committee

LIFE community across Europe urge EU leaders to protect and strengthen the LIFE Programme as a standalone instrument in the next Multiannual Financial Framework

### From the organisations delivering Europe's environmental and climate action on the ground

We, the undersigned organisations, beneficiaries of the European Union's LIFE Programme over recent years, write to you as organisations working on the ground to turn European policy into tangible results across territories, ecosystems and communities.

Across Europe, we have restored wetlands and forests, protected endangered species, reduced emissions, supported farmers and local authorities, and demonstrated innovative solutions that have later been scaled up through European and national policies. This is not a theoretical impact; it is measurable, replicable and rooted in the territories.

This is what LIFE makes possible.

### A proven instrument at risk

We are deeply concerned by ongoing discussions on the next Multiannual Financial Framework (MFF) 2028–2034, which could weaken or fragment the LIFE Programme by integrating it into broader funding mechanisms.

From our direct experience, such a shift would not be a technical adjustment, it would fundamentally alter how Europe delivers its environmental and climate objectives.

LIFE's strength lies precisely in what makes it unique:

- its European added value, going beyond national priorities,
- its direct management by the European Commission, ensuring a common European approach, clear accountability and coherence across Member States,
- its bottom-up approach, enabling innovation from local actors,
- and its role as a bridge between policy, science and implementation.

Diluting these features would mean losing one of the EU's most effective delivery tools.

### From policy to practice: the missing link

Europe has set ambitious goals under the European Green Deal, the Nature Restoration Law, the Paris Agreement, and the EU's climate and biodiversity targets for 2030 and beyond.

However, ambition alone does not deliver results.

Across Europe, communities are already facing the concrete consequences of climate change, biodiversity loss, pollution and rising resource pressures — from droughts, floods and wildfires to declining ecosystem services, high energy costs and increasing pressure on rural livelihoods. LIFE helps turn these challenges

into practical solutions by supporting nature-based approaches, local innovation, cleaner technologies, energy communities, ecosystem restoration and other concrete responses tailored to local needs.

What we see on the ground is clear: when environmental funding is mainstreamed into broader instruments without dedicated safeguards, it becomes secondary to competing priorities. Projects become harder to implement, innovation slows down, and the connection between European objectives and local action weakens.

LIFE fills this critical gap.

It enables:

- the implementation of EU environmental legislation,
- the testing and scaling of solutions,
- and the engagement of actors that would otherwise be excluded, including local authorities, NGOs, SMEs and research institutions.

Without a strong and independent LIFE Programme, this chain breaks.

## A community built by Europe

For over three decades, LIFE has not only funded projects, it has built a true European community of practice.

It is a unique instrument, implemented directly by a wide range of actors — local, regional and national authorities, civil society organisations, research centres and businesses — working together to turn European policies into reality on the ground.

Thousands of organisations have collaborated across borders, sharing knowledge, replicating solutions and strengthening European cohesion through environmental action. In this sense, LIFE is a truly transversal fund, bringing

together Europeans around a common purpose: delivering the EU's environmental and climate objectives. We are that community.

And we stand ready to continue delivering, but we need the right tools.

## Our call

At this critical moment, we urge you to ensure that the next MFF reflects not only Europe's ambitions, but also the practical conditions required to achieve them.

We respectfully call on you to:

1. **Guarantee a standalone LIFE Programme** within the next Multiannual Financial Framework (2028–2034), with its own legal basis, governance and visibility.
2. **Secure a dedicated and reinforced budget for LIFE**, aligned with the scale of Europe's climate and biodiversity challenges.
3. **Maintain direct management by the European Commission**, ensuring transparency, accessibility and a truly European approach.
4. **Preserve LIFE's bottom-up and multi-actor nature**, enabling continued participation from local authorities, civil society, research organisations and businesses.
5. **Ensure continued and strengthened financial support for all types of beneficiaries**, including non-profit organisations and civil society networks, recognising their essential role in implementing, scaling and safeguarding EU environmental and climate policies.
6. **Recognise LIFE as a strategic delivery instrument, essential for implementing EU legislation** and bridging the gap between innovation and large-scale deployment.

**Signed by the following organisations, beneficiaries of the European Union's LIFE Programme, in the context of the negotiations on the next Multiannual Financial Framework (2028–2034):**

### **Public authorities (local, regional or national administrations)**
